

Assignment for Friday, February 3

Before class, do the following:

1. Read the notes on Histograms in R. At some point, either before or after class, you should read these notes *carefully* (maybe both). This is the last set of notes on R with a lot of new ideas, so continue working hard. It will get easier. I have posted these notes on Dropbox, which means you can comment on the document. (Hint: Dropbox allows you to comment on a specific *area*. That seems especially useful.) Please leave a comment if anything is unclear or if you have any questions. This will help me better prepare for the discussion in class and help me improve the notes for future classes. It will also help you earn full participation points. Unfortunately, you need to register an account with Dropbox before commenting. However, it is free and Dropbox is an excellent tool.
2. Finish Part 3 of *Foundation* (pp. 97-169). The book will be covered on Exam 1 on February 22. Answer the relevant questions from the “Discussion Questions for *Foundation*” available on the course webpage.
3. See the additional review questions at the bottom of the course webpage.
